ECHO® MOLST: Honoring Preferences at End-of-life

Who Determines Who Has the Right to Make End-of-life Decisions

COVID-19: Why it Matters
Presenter

Patricia A. Bomba, MD, MACP
Vice President & Medical Director, Excellus BlueCross BlueShield
Chair, MOLST Statewide Implementation Team; eMOLST Program Director
Founding Member, National POLST Paradigm
Lead, ECHO MOLST

The speaker has no significant financial conflicts of interest to disclose.
Learning Objectives

• Define capacity

• Describe determination of medical decision-making capacity

• Explain NYS Public Health Law and recent changes

• Review importance in terms of COVID-19
Capacity: Definition

• Capacity is the ability to:
  – take in information,
  – understand its meaning and
  – make an informed decision using the information

• Capacity allows us to function independently

• Capacity is not the same as competence
Capacity: Definition

• Includes Mental Skills Used to Function in Everyday Life
  – Memory: ability to remember things
  – Language
  – Ability to use logic
  – Ability to calculate
  – Ability and “flexibility” to turn attention from 1 task to another
  – Executive functions
Executive Functions

- Problem solving
- Planning
  - including appreciating consequences of an action
- Initiation, direction, execution of actions
- Sequencing
- Abstraction and insight
- Ability to monitor one’s one behavior
- Inhibition of inappropriate behaviors
- Impact of frontal lobe function on ADLs and decisional capacity
Capacity Determination

• Capacity is task-specific

• Patient’s capacity to make different decisions can vary
  – Medical care and treatment
  – Manage money
  – Write a will
  – Continue to drive
  – Possess firearms

• Key principle
  – Assessment of the patient’s ability to understand the consequences of a decision
Advance Care Planning: Capacity is Task Specific

• Capacity to choose health care agent is different than the ability to make medical decisions

• Capacity to make medical decisions is based on the complexity of decisions
  – simple health care decisions
  – request for palliation (relief of pain and suffering)
  – complicated decisions regarding DNR and life-sustaining treatment
Medical Decision-Making Capacity: Three Key Patient Abilities

• Ability to understand relevant information about his or her condition, the probable outcomes of the disease and potential interventions, and its meaning in terms of the:
  – disease process
  – proposed therapy and alternative therapies;
  – advantages, adverse effects and complications of each therapy
  – Possible course of the disease without intervention

• Ability to make an informed decision using the information, based on his or her beliefs and values and understand the consequences of the decision

• Ability to communicate a decision
Cultural Differences

• Can make assessing medical decision-making more difficult

• Capacity assessment involves:
  – Abstract concepts not easily communicated in another language
  – Interpret value judgments on basis of what is considered reasonable

• **IMPORTANT**: Avoid assuming patients hold certain beliefs on the basis solely of ethnic background
  – Varying degrees of acculturation and assimilation of culture
  – Variation within an ethnic group
  – **Always** ask the patient about their personal values and beliefs!
Capacity Assessment: Key Elements

• Detailed medical history from the patient, with attention to the patient’s ability to:
  – Organize time relationships
  – Recall facts
  – Reason abstractly

• Collateral history from family, if available

• Focused physical examination

• Assess cognition, function and screen for depression

• Testing to exclude reversible conditions that may cause temporary incapacity
Capacity Assessment: What “Not” To Do

• Purely base assessment on a third party’s opinion
• Simply have a conversation with the patient
• Merely use preferences expressed by patient
• Only use the MMSE score and designate a score below which the patient lacks capacity
• Consider “abnormal” answers as evidence of lack of capacity rather than recognizing the patient’s lifestyle and/or personal experience
• Disregard individual habits/behaviors which the person always had
• Use risky behavior as evidence
Who Determines Capacity

• Under NYSPHL, a patient is presumed to have capacity until determined the patient lacks capacity

• Concurrent determination required

• Prior to May 28, 2018, only a physician could determine the patient’s capacity to make decisions to withhold and/or withdraw life-sustaining treatment with or without the MOLST

• Special expertise required:
  • Persons with DD/ID
  • Persons with Mental Illness
Can an NP Determine Capacity?
This table is accurate as of Feb 3, 2019.

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Initial Determination</th>
<th>Concurring Determination</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| To empower a health care agent | Yes, as of February 3, 2019 | Yes, as of February 3, 2019 | • As a result of the 2018 amendment to the health care proxy law, the determination of incapacity can be by the "attending physician" or "attending nurse practitioner."
• In life-sustaining treatment cases the attending physician or nurse practitioner must consult with "another physician or nurse practitioner."
• This means the HCP Law does allow an NP to determine incapacity or provide the required concurrent determination. |
| To empower a FHCDA surrogate | Yes, as of May 28, 2018 | Yes | • The FHCDA, in PHL 2994-c, as of May 28, provides that the determination of incapacity must be by the "attending physician or attending nurse practitioner." In life-sustaining treatment cases there must be a concurring determination by a "health or social services practitioner" which includes an NP.
• This means that the FHCDA does allow an NP to determine incapacity or provide the required concurring determination. |
| To empower a § SCPA 1750-b surrogate (decisions for patients with intellectual disabilities) | No | No | • § SCPA 1750-b(4)(a) provides that in life-sustaining treatment cases the "attending physician" as defined in PHL 2980.2 must determine incapacity.
• The attending physician must consult with another physician or licensed psychologist. Either the attending or consult must have special qualifications relating to the treatment of persons with intellectual disabilities.
• This means that § SCPA 1750-b does not allow an NP to determine incapacity or provide the required consult. |

Can an PA Determine Capacity?

This table is accurate as of June 17, 2020.

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Initial Determination</th>
<th>Concurring Determination</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| To empower a health care agent | Yes, as of June 17, 2020 | Yes, as of June 17, 2020 | • As a result of the 2019 amendment to the health care proxy law, the determination of incapacity can be by the attending practitioner – a physician, nurse practitioner or physician assistant.  
• In life-sustaining treatment cases the attending practitioner must consult with another physician, nurse practitioner or physician assistant.  
• This means the HCP Law does allow PAs to determine incapacity or provide the required concurrent determination.  
In cases where the patient lacks capacity due to mental illness a psychiatrist must be the concurring. |
| To empower a FHCDA surrogate | Yes, as of June 17, 2020 | Yes | • The FHCDA, in PHL 2994-c, as of June 17, provides that the determination of incapacity must be by the attending practitioner (a physician, nurse practitioner or physician assistant.) In life-sustaining treatment cases there must be a concurring determination by a "health or social services practitioner" which includes a PA.  
• This means that the FHCDA does allow a PA to determine incapacity or provide the required concurrent determination. |
| To empower a § SCPA 1750-b surrogate (decisions for patients with intellectual disabilities) | No | No | • § SCPA 1750-b(4)(a) provides that in life-sustaining treatment cases the "attending physician" as defined in PHL 2980.2 must determine incapacity.  
• The attending physician must consult with another physician or licensed psychologist. Either the attending or consult must have special qualifications relating to the treatment of persons with intellectual disabilities.  
• This means that § SCPA 1750-b does not allow an PA to determine incapacity or provide the required consult. |

Keypoints

• Capacity is the assessment of the patient’s ability to understand the consequences of a decision.
• Capacity is “task specific.”
• Authority of NPs to determine capacity
  – To empower a FHCDA Surrogate, as of May 28, 2018
  – To empower a health care agent, as of February 3, 2019
• Authority of PAs to determine capacity
  – To empower a health care agent/FHCDA Surrogate, as of June 17, 2020
• Authority of NPs & PAs does NOT extend to 1750-b
  – Only a physician can determine capacity
