Benefits/Burdens of Tube Feeding/PEG Placement for Adults

Tube Feeding/PEG Placement Guide

Patient Name_____ **Date of Birth**_____ **Date** _____

Complete the blanks and check all that apply:

1. I have completed a global assessment and:
   - ☐ No reversible factors have been identified
   - ☐ Reversible factors have been identified and addressed, but eating/feeding/nutritional assessment have not shown significant improvement

2. For this patient, the assessment of potential benefits of tube feeding are as follows (Refer to *Benefits and Burdens of PEG Placement* table, on page 1 of this guideline, as a method to complete this assessment):
   - ☐ Likely ☐ Uncertain ☐ Not Likely **to prolong life**
   - ☐ Likely ☐ Uncertain ☐ Not Likely **to improve quality of life**
   - ☐ Likely ☐ Uncertain ☐ Not Likely **to enable potentially curative therapy or reverse the disease process**

3. Discussions have taken place with: _____
   Name of Medical Decision Maker
   ☐ Patient ☐ Health Care Agent ☐ Public Health Law Surrogate ☐ § 1750-b Surrogate*
   **If surrogate for a developmentally disabled person, consultation with medical ethics or legal services is suggested, as special rules apply.*

   _____
   Name(s) or other person(s) involved in the discussion

   About:
   - ☐ understanding of current illness and prognosis (including functional recovery)
   - ☐ benefits and burdens of PEGs and other treatment options
   - ☐ patient's advance directives, prior wishes, values, cultural & spiritual concerns, if any, and goals for care (rather than technical options)

4. ☐ Discussions about the above areas have been documented in the chart

5. Tube Feeding: ☐ **WILL** be started ☐ **WILL NOT** be started

6. **FOR PATIENTS WHO WILL START TUBE FEEDING:**
   - The tube feeding decision is based on:
     - ☐ prolonging life
     - ☐ improving quality of life and/or functional status
     - ☐ enabling potentially curative therapy or reversing the disease process
     - ☐ other _____

Because the benefits or failures of tube feeding are likely to occur within 3-6 months following placement, periodic reassessment is most important.

- The initial re-assessment of the need for tube feeding will be in: ☐ 30 days ☐ 60 days ☐_____days #

Subsequent assessments will be based on clinical status.

- Need will be based on the following goals of therapy:
  - ☐ returning to baseline level of consciousness
  - ☐ prolonging life
  - ☐ weight gain and/or improvement in nutrition
  - ☐ improving quality of life and/or functional status
  - ☐ regaining ability to swallow
  - ☐ enabling potentially curative therapy
  - ☐ other: _____
